Jeff,

I was able to view the page in wcms and the iframe looks to be working correctly. The [CLICK HERE for full-screen map](#) works as well, but I would change the target to open in a new window since there is no way to navigate back to the [epa.gov](http://epa.gov) page from the application itself.

Remember, you are looking at content now of a test layer. The viewer that we are polishing up will have information regarding that feature.

Those features are also displayed in the legend so users will know what those points are representing.

Only that point has information. The other locations do not have information to show about it they are just locations of command posts.

Noticed...

on the pink dot on the map has information if clicked.

Is this because it's a test?

Clicking any other dot, or anywhere else on the map, it says "No information available."

Jeff, I will have the team send you the line of code for your testing purposes.

The embedded viewer will be a test viewer since we are polishing up content. Once we feel like we have a final draft we will replace

a line of code and perform the final check with you guys.

If I can offer a technical suggestion, best is to provide a simple code to post, like a iFrame. The map viewer we posted yesterday embedded the map in an iFrame tag, which worked fine.

Best to avoid having to upload support files, external javascript or xml calls, or CSS .classes. The EPA Web CMS disables those, or makes them difficult to work around.

Dan,

Based on the conference call with Eric Delgado, Marty McComb, and myself I am codifying some of the points we discussed.

The OPS viewer url and login info is below. This viewer is a more robust version of the Public Version.

<https://gis.eparm.net/goldkingops/#/-107.8340/37.2698/12>

user=

**Nonresponsive**

  
pass=

The tentative timeline for the viewer will be tomorrow morning for a slimmed down version of the Public Viewer by tomorrow morning. It will contain locations and data displayed that have been submitted to HQ in the three links – trend graphs, analytical link, and water quality. The tool,

SADIE, that is in the OPS viewer is going to be replaced with a webpage based analytical report. Over the course of a few days (possibly by Monday) we will finished QC'ing the latest monitoring data and working through the data differences between the three regions.

Eric/Marty/Janine,

If there is anything you want to add or about this please chime in.

Thanks everyone,

Dan
